

Primary Science Set

The Primary Science Set provides a great way for young children to start learning about science. This set encourages children's natural curiosity while helping to lay a good foundation for early science learning. Children learn by taking part in experiences through play and by performing real science experiments.

Children using the Primary Science Set will:

- Use science tools and equipment to explore
- Participate in scientific investigations
- Understand basic science safety practices
- Use the five senses to explore and observe
- Begin to use common science vocabulary
- Discover more about the everyday world

Get ready to observe, test, explore, experiment, and discover science!

Suggested Use

- Introduce the science kit to the children by showing and naming each tool. Demonstrate how each specific tool can be used to experiment and explore. Note: A photo of each tool and its name is shown on the reverse side of this guide.
- Give children time to explore the science tools on their own. This will ensure that children have a basic idea of how the tools work.
- Allow children "free play" time to use the science tools with water. This gives children an opportunity to "play" science and to practice using the tools before performing science experiments.
- Perform easy science experiments with the 10 double-sided activity cards. The activity cards are easy to follow, fun, and involve lots of science learning. An adult should assist children or oversee the experiment. Some extra supplies (from home or school) may be needed in order to perform the experiment.
- Hand wash the science tools with warm, soapy water after use.

 **WARNING:**
CHOKING HAZARD - Small parts.
Not for children under 3 years.

Included in the Primary Science Set:

Beaker

Eyedropper

Flask

Funnel

Goggles

Magnifying Glass

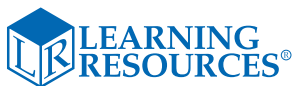

Test Tubes

Tweezers

Activity Cards (10)
